## **Examination table for Gynaecology – electrically adjustable**

standard or advanced models

chromium-plated or white epoxy coated

wide variety of upholstery colours

**medical furniture made in Sweden**

50 years experience · Quick delivery · Competitive prices · Excellent customer service

The table is equipped with an electrically adjustable Trendelenburg/shock position. The leg section (accessory), located under the seat section, can easily be pulled out if a patient goes into shock or simply needs to rest the legs.

## Examination table for Gynaecology – electrically adjustable

Our Examination table for Gynaecology is designed in consultation with health-care professionals, with an emphasis on functionality, user-friendliness, patient comfort and quality. The result is a functional, sturdy and compact chair that does not take up much space. The friendly design will help your patients to be more relaxed in the examination room.

- **Chromium-plated** (standard) or white epoxy coated chassis.
- **Electrical** adjustment by means of two or three motors. Two motors (adjusting the height and Trendelenburg position/seat angle) are standard.
- **Gas spring** (standard) or electric motor for setting the angle of the back rest.
- **Foot control** (standard) or hand control. Double controls are available as an accessory.
- **100 mm** standard castors, gray (see last page). Also available with a white designer castors.
- **Leg supports** in different styles.
- **Various colours** of upholstery to match with the room's colour scheme (see back page).
- **Side supports** (option) which widens the table. Can be folded.
- **A large number** of accessories are available (see last page).

The **leg supports** are available in special ergonomical design, one with soft covers and the other one made of black integral foam. The leg supports are extremely easy to adjust in any direction and can be moved along the accessory rail to suit the size of the patient. They can be removed quickly and easily from the accessory rail.

The **chromium-plated top frame** protects the pads against direct hits, and is designed to avoid pinching.

In its lowest position, the table becomes very low. The leg supports and hand-grips can easily be removed from the accessory rail, and the side supports (if used) can easily be folded down. This makes it easier for patients to get on and off the table, even from wheelchairs, patient trolleys or beds.

The chair can be adjusted to a very low position, if needed, and at the same time the seat can be tilted, making it easy for the patients who require a low chair position.

**The patient handgrips** (accessory) can be adjusted along the accessory rail and are also easy to remove. Chromium-plated in a hygienic, all-welded design.

**A paper roll holder** is included.

**The hard plastic cover**, which protects the electric motor, makes cleaning easier.

**The back rest** can be adjusted to various positions using a gas spring (standard). An electrically adjustable back rest (accessory) is perfect in situations where the back rest is adjusted often. It can be ordered with or without Quick Release. The back rest can be supplied with folding side supports (option).

**A wide height adjustment range** makes it easy for the health care professionals to adjust the table for a correct ergonomic posture, and makes it easy for the patient to get on and off the table. To make it easier when transferring a patient from a wheelchair, patient trolley or bed, the leg supports and other accessories can be removed quickly and easily from the accessory rail.

**A stainless-steel waste bowl** with a flat bottom is included. The bowl can easily be removed when disinfecting. A Urology attachment including a waste bowl with drain, which is perfect for Urology examinations, is also available as an accessory.

**The seat section** is adjusted electrically. When changing the seat section, the seat angle and the back rest angle remains fixed, maintaining the patients' sitting angle. The seat plate can easily be removed for cleaning.

**The motor control box** is connected to an ordinary power outlet, 220-240v (North America, 110-120v). Motors and controls have 24v via the control box. Battery power is available as an accessory. The foot controls are fitted as standard, the hand controls are optional.

**The foam pads** are covered with a high quality leather-like material and provide high comfort during examinations. The upholstery is available in a wide variety of colours.

**Central locking castors** (100 mm, gray) are fitted as standard. They roll easily, which helps when the room should be cleaned, and makes it possible to move the chair while patients are seated. The locking mechanism, locking all four castors at one press, is located at the back. White designer castors are also available (accessory).

Because the table can be raised from a very low position to a very high position, health-care professionals can achieve a correct ergonomic working posture. The seat section can be tilted, which makes the examination easier. The back section and the seat section move together, which is comfortable for the patient.

## Dear Medical Professional

This brochure shows our electrically adjustable Examination table for Gynaecology.

Through our products we desire to make your work easier, increase patient comfort and make medical care more enjoyable and efficient.

Long experience and continuous dialogue with medical professionals about the needs and demands for high quality products well adapted to their purpose, have given us the knowledge to produce state-of-the-art medical equipment.

We are proud of our functional, user and patient friendly and Swedish designed products. These combined with our quick delivery, competitive prices and excellent customer service make us the right choice.

We use only the highest quality materials, and we work actively to find materials that are as environmentally friendly as possible.

Please contact us if you desire other product brochures or more information.

Welcome to our world of medical furniture!
