Examination table, two-sectioned

standard or advanced models

hydraulically or electrically adjustable

chromium-plated or white epoxy coated

wide variety of upholstery colours

medical furniture made in Sweden

50 years experience · Quick delivery · Competitive prices · Excellent customer service

The table is equipped with a variably adjustable Trendelenburg/shock position. The controls for the gas spring are positioned at an easily accessible point at the foot end. A motor for Trendelenburg and a motor for the back rest are available as accessories and are easily adjusted by foot or hand control.

Examination table, two-sectioned

Our table is designed in consultation with health-care professionals with an emphasis on functionality, user-friendliness, patient comfort and quality. A range of different designs are available, in order to meet the needs of different health care activities.

- **Chromium-plated** (standard) or white epoxy coated chassis.
- **Hydraulic or electric** height adjustment. The electric version is available with one, two or three motors.
- **Trendelenburg position** (can be excluded)
- **Gas spring** (standard) or electric motor for adjustment of back rest and Trendelenburg position.
- **Individual locking** (standard) or central locking castors.
- **Various widths** with 70 cm as standard.
- **Various colours** of upholstery can be matched with the room's colour scheme (see back page).
- **A large number** of options and accessories (see back page).

The sturdy chassis has four lifting points, making the table very stable.

The chromium-plated top frame protects the pads against direct hits, and is designed to avoid pinching.

Because of the stable construction, the patient can sit at the edge of the table safely.

In its lowest position, the table becomes very low, and together with the patient friendly design, makes it easy for patients to move on and off the table, even from a wheelchair, trolley or bed.

A paper holder and a tear off edge are included (the tear-off edge also holds the paper in place).

The hard cover plastic makes cleaning easier and has a built-in space for storage.

The back rest and the Trendelenburg position are both adjusted variably by gas springs (standard) via easily accessible controls, or by electric motor (accessory). An electrically adjustable back rest is an advantage when frequent adjustments of the back rest are needed.

A wide height adjustment range makes it easy for the health-care professionals to adjust the table for a correct ergonomic posture, and makes it easy for the patient to get on and off the table.

The hydraulic pump (non-electric version) is easily pumped and is adjusted by a foot pedal on both sides of the table.

The motors' control box (electric versions) is connected to an ordinary power outlet, 220-240v (North America, 110-120v). Motors and controls have 24v via the control box. Battery power is available as an accessory. Choose between hand control (standard) and foot control. Double controls are available (option).

The foam pads are covered with a high quality leather-like material and provide high comfort during examinations. The upholstery is available in a wide variety of colours.

The castors (125 mm) are easy rolling. Two individually locking, one directional locking and one unbraked are standard. Central locking castors (accessory), also available in white designer style, are being locked by pressing one of the two pedals. The pedals, which also control the directional locking castor, are situated at the foot end.

Because the table can be raised from a very low position to a very high position, health care professionals can achieve a correct ergonomic working posture.

Dear Medical Professional

This brochure shows our two-sectioned examination table.

Through our products we desire to make your work easier, increase patient comfort and make medical care more enjoyable and efficient.

Long experience and continuous dialogue with medical professionals about the needs and demands for high quality products well adapted to their purpose, have given us the knowledge to produce state-of-the-art medical equipment.

We are proud of our functional, user and patient friendly and Swedish designed products. These combined with our quick delivery, competitive prices and excellent customer service make us the right choice.

We use only the highest quality materials, and we work actively to find materials that are as environmentally friendly as possible.

Please contact us if you desire other product brochures or more information.

Welcome to our world of medical furniture!
