

Chassis

To the portable couches

When the Swedish national soccer team needed a solution for the World Cup in the USA 1994, which combined the portable Tarsus couches' stability with a hydraulic height adjustment, we developed our unique height adjustable chassis.

With the combination of a Tarsus portable couch and a the chassis, the therapist gets a two-in-one solution: one portable, one stationary. The same portable couch you use "out in the field", is easily mounted on top of the chassis you have at home in your clinic, transforming the portable couch to a sturdy stationary hydraulically or electrically height adjustable couch.

The chassis may be adapted to all of Tarsus' portable couches, regardless of width and model.

Chassis

All-welded powder coated steel tubes

Height

50-86cm

Weight

Ca 33kg

Warranty

10 years on the chassis, 2 years on motor and/or hydraul. Applies for normal use.

Castors

A pair of wheels mounted on the foot end side is included. Lockable and central locking castors are available.

Fits following models

Options

Lockable castors

Centrallocking castors
